

Vaccine Assist Programme Namibia

Can the vaccine give me COVID?

None of the vaccines in use in Namibia contain the live virus that cause COVID-19.

This means the COVID-19 vaccine **CANNOT** make you sick.

The vaccine teaches your immune system to fight COVID-19, and this can sometimes cause symptoms like fever. These symptoms are normal and prove that your body is learning to protect itself.

The vaccine will
protect you
from COVID-19
